At this point I would like to thank the following people who made my bachelor thesis possible and supported me during my time in Sweden:

- **Sabina Rebeggiani** for being a great supervisor during my time in Sweden. She taught me a lot of knowledge about surface metrology and the scientific of working.
- **Martin Bergman** for supervising me in the relationship with Volvo and teaching me about design and soft metrology.
- **Lars Bååth** for supervising me with the optics and physics of the project.
- **Ulrich Schmitt** for supervising me at Aalen University during my bachelor thesis.
- **Rainer Börret** for supervising me at Aalen University during my bachelor thesis and making my studies abroad possible.
- **Volvo Cars**, especially Ola Wagersten, Anna Larsson and Viktor Wadenvik for the bi-weekly meetings and the provided information about soft metrology and the quality control process at Volvo Cars.
- **Tim Malmgren and Joakim Wahlberg** for always helping out with practical work and the machines in FabLAB.
- **Lukas Ziegler** for his help during the last month of my thesis.

Last but not least I want to thank my family for their continuous support they have given me throughout my time in Sweden and my whole studies.
